

**DESCRIPTION**

The PSP 43-687 First Aid Eye Wash is to be used when the eye has come into contact with dust and salts. Rinsing is then absolutely necessary to dilute the harmful substances and minimise eye damage. The eye wash contains liquids that also occur in the eye and is completely neutral. The eye wash neutralises acids and hydroxides if these substances have entered the eye. When hydroxides or acids enter the eye, the pH value of the eye changes and an etching effect occurs.

**USAGE**

The eyewash bottle features clear instructions on the label of the bottle. Capacity: 500 ml.

Tip: stock at least two pieces of eye wash, two eyes may be affected in an accident.

**LEGAL FRAMEWORKS**

An employer is obliged to provide the company with sufficient materials, depending on the nature of the company's conduct and the risk profile.
